Order# HEG2

There is something so incredible and so NEW and it is called "HELLFIRE GEN 2". It is the epitome of all any rapid fire system ever. From the inventor of the original and most famous rapid fire system ever this one use all new "Recoil Assist Technology" that allows for one handed operation. Unlike "Bumpfiring" this system allows for a firm grip on the gun grip and stock for optimum accuracy and controllability. All you have to do is squeeze the trigger to shoot at rates up to 900 rpm. It is ATF legal and compliant and comes with it's own certificate of legality.

Fits all rifles listed below.

\*Note: This item attaches to a pistol grip, you must have a pistol grip for it to wrap around.

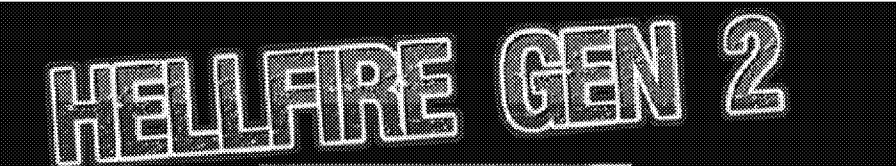

AK-47, Armalite AR-150, AR-15, SKS, Ruger 10-22, Ruger Mini-14, HK-91 & 93 & 94, Beretta AR-70, 30 caliber carbine, Daewoo K-1 & K-2, M-1A, Mini-14, M&K SO with pistol grip, FNC, M-1 Garand, SPAS 12 Ga shotguns, USAS 12ga Shotguns, TED-22, and most other guns.

This item is restricted in the following cities and/or states: CA, CT, DE, FL, HI, MD, MA, MN, NJ, RI, VT, & WA.

## GEN II <sup>TM</sup>

Patent Pending

**READ INSTRUCTIONS CAREFULLY!**

**IMPORTANT!**

**BEFORE INSTALLATION OR USE  
MAKE SURE GUN IS UNLOADED AND  
POINTED IN A SAFE DIRECTION.**

### **CERTIFICATE OF LEGALITY**

The "Hellfire Gen II" is not subject  
to the provisions of 18 United States Code or  
26 United States Code.

Any questions contact:

**DEPARTMENT OF THE TREASURY**

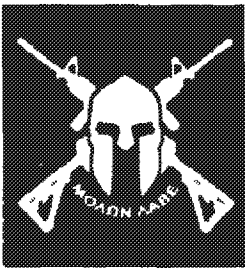

Bureau Of Alcohol, Tobacco, Firearms

Washington, DC 20226

Reference #3311

**Text us for your free installation and  
firing video  
sent directly to your phone**

### **WARNING!**

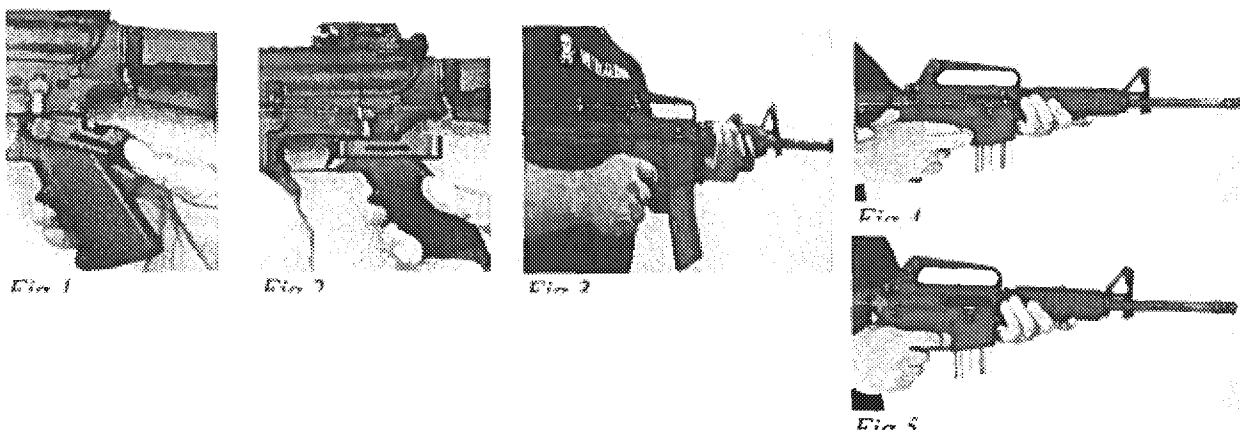

- 1. Carry the legality card whenever you use or have this device in your possession! Failure to do so can result in your arrest or seizure of your gun.
- 2. This device must be used with extreme discretion. Do not cause problems for yourself or others by using it in a foolish manner. Always think safety first!
- 3. This may be the last time that you, as a free person living in an independent nation may have the opportunity to buy or use something like this device!

## "SNAP-ON HELLFIRE GEN II"<sup>PAT.PEND.</sup> INSTRUCTIONS

The original "Hellfire" was the pioneer of rapid fire innovation. It was first introduced in 1989 and is the most famous trigger system ever invented. The idea was always to apply pressure to the back of the guns trigger sequentially firing multiple rounds at the control of the user. It has taken about 28 years to evolve but the "Hellfire GEN II" is the epitome of this concept and evolution. It is refined and state of the art simplicity. Congratulations on your purchase.

### How the Hellfire Gen II works:

When installed properly on the gun and grip, your thumb and index finger are touching the device. The device "bridges" your thumb to index finger via a metal bar and allows the device to glide freely along the grip of the gun. When you slowly squeeze the trigger the device pushes rearward creating a space between your thumb, index finger and the grip of the gun. When a round is fired, ejects and re chambers the next round, the space is closed and quickly resets the guns trigger. The special "Timing" rubberized buffering system slows down this action just enough for the next shot to fire as long as even pressure is kept on the trigger. This also serves to prevent premature "Hammer drops". As long as there is even pressure applied to the trigger, the gun will continue to fire. Single shots, bursts, to emptying complete magazines are in the control of the operator.

The Hellfire Gen II may be individually hand held, shoulder fired, or body supported. It may be used on pistols or rifles with one or both hands as it does not require "pushing forward with the front hand" as in "Bump-firing". Thus, the Hellfire Gen II is NOT a Bump-fire device.

"Hellfire Gen II" Snap On systems are installed easily without fasteners by following these simple instructions:

1. Snap it on to the right or left side of the gun (Fig. 1). LEFT side for right handed shooters. RIGHT side for left handed shooters.
2. Install it so the paddle with the magnet is in front preferably (Fig. 2), or behind the gun's trigger if more comfortable.
3. The design features a cutout designed to clear the safety on the AR15 platforms when mounted on the left side.
4. The strong Neodymium magnet will hold the device and center itself onto the gun's trigger as well as the slow expanding rubber buffer.
5. The device will snap on and off easily and will quickly store in your pocket if need be.

### TO FIRE:

1. To first gain familiarity with how the device functions, place the rifle at your side (Fig. 3). We call it "The Commando position".
2. Place your index finger on the trigger and your middle finger on top of your index finger (Fig. 4) and slightly squeeze the trigger. This should give you a multiple burst or more. After you achieve this, you can move your middle finger (Fig. 5) and just use your index finger. The key is understanding how the device moves upon firing.
3. Once you master this easy task you can move the gun up to your shoulder or any other shooting position.
4. For single shots, just pull the trigger all the way rearward as normal.
